

SET – 1 Part – A

Why is a good design important in user interfaces?

- a) It reduces development time b) It ensures user satisfaction and productivity
- c) It eliminates all bugs in software
- d) It is easier to implement than a bad design

Which of the following is a characteristic of graphical user interfaces (GUIs)?

- a) Command-line interaction b) Text-based operations
- c) Use of visual elements like icons and windows
- d) Lack of user interaction

What is the primary goal of designing user interfaces for people?

- a) To increase the complexity of systems
- b) To ensure systems are user-friendly and intuitive
- c) To prioritize aesthetics over functionality
- d) To eliminate the need for training

What are the "Seven Commandments" in user interface design aimed at addressing?

- a) Hardware efficiency b) Software debugging
- c) System security issues d) Common usability problems

What is a primary goal of interface design?

- a) To make the system look complex
- b) To ensure users can interact efficiently and effectively with the system
- c) To prioritize aesthetics over functionality
- d) To eliminate the need for navigation

Why is consistency important in interface and screen design?

- a) It reduces the need for advanced technology
- b) It ensures all screens are identical
- c) It helps users predict interactions and reduces confusion
- d) It eliminates the need for design standards

What is a primary goal of interface design?

- a) To make the system look complex
- b) To ensure users can interact efficiently and effectively with the system
- c) To prioritize aesthetics over functionality
- d) To eliminate the need for navigation

Why is consistency important in interface and screen design?

- a) It reduces the need for advanced technology
- b) It ensures all screens are identical
- c) It helps users predict interactions and reduces confusion
- d) It eliminates the need for design standards

What is the primary function of menus in a system?

- a) To increase system complexity
- b) To support navigation, execution, and information display
- c) To replace user input entirely
- d) To store system logs

Which type of menu structure allows users to move through options in a step-by-step manner?

- a) Single-sequential linear menus
- b) Hierarchical menus
- c) Event trapping menus
- d) Connected menus

SET – 2 Part – A

Select the following is a key benefit of good user interface design?

- a) Increased complexity for developers
- b) Enhanced user satisfaction and productivity
- c) Reduces usability for end users
- d) Decreases overall system reliability

Which of the following is a disadvantage of graphical systems?

- a) Requires less memory
- b) Uses text-based commands
- c) Consumes more resources like memory and processing power
- d) Easier to develop compared to text interfaces

Which of the following is NOT one of the "Seven Commandments" for designing user interfaces?

- a) Strive for consistency
- b) Offer informative feedback
- c) Minimize cognitive load
- d) Ignore user input

When considering human interaction speeds in interface design, which of the following is most crucial for ensuring usability?

Giving users more complex choices

Delaying responses to keep users engaged

Ensuring system response matches the user's interaction speed

Ignoring system performance in favor of design aesthetics

In interface design, what does "visually pleasing composition" refer to?

The random arrangement of interface elements

The use of multiple fonts and colors

c) The strategic placement of elements to create an attractive layout

d) The exclusion of images and graphics

What is the significance of consistency in interface design?

a) It allows for creative freedom in design

b) It helps users quickly learn and predict how to interact with the interface

c) It encourages the use of various styles and formats

d) It makes the interface more complex and harder to navigate

Which of the following is NOT a key component of menu contents?

a) Menu Title

b) Choice Descriptions

c) Completion Instructions

d) User Preferences

In menu formatting, what does "item arrangement" refer to?

a) The way colors are used in the menu

b) The way options are prioritized and displayed

c) The length of the menu titles

d) The use of graphics in the menu

Which of the following is a characteristic of an effective input device?

a) High cost

b) Complexity in use

c) Ergonomics and comfort

d) Limited compatibility

Which color combination is generally considered the least accessible for individuals with color blindness?

a) Red and Green

b) Blue and Yellow

c) Black and White

d) Blue and Red

SET – 3 Part – A

What is one advantage of graphical systems?

a) They require less memory than text-based systems

- b) They are easier to learn due to visual cues
- c) They have no disadvantages
- d) They are preferred for high-speed calculations

The concept of direct manipulation in GUI implies:

- a) The use of keyboard shortcuts for all actions
- b) A focus on precise, text-based commands
- c) Interacting directly with objects on the screen, such as dragging and dropping
- d) The elimination of menus and icons

Why is it important to consider human interaction speeds in user interface design?

- a) To determine hardware requirements
- b) To eliminate user feedback
- c) To ensure the system meets user performance capabilities
- d) To prioritize design aesthetics

What is the purpose of design standards or style guides in user interface design?

- a) To standardize programming languages
- b) To make systems look identical to competitors
- c) To eliminate the need for user training
- d) To ensure consistency and usability across the interface

What does organizing elements in screen design primarily focus on?

- a) Arranging elements logically to improve usability
- b) Randomly placing items for variety
- c) Using as many colors as possible
- d) Displaying all data on a single screen

What is the purpose of navigation and flow in screen design?

- a) To make users explore the interface randomly
- b) To prioritize aesthetics over usability
- c) To increase the number of navigation buttons
- d) To guide users through tasks logically and efficiently

What does organizing elements in screen design primarily focus on?

- a) Randomly placing items for variety
- b) Arranging elements logically to improve usability
- c) Using as many colors as possible
- d) Displaying all data on a single screen

What is the purpose of navigation and flow in screen design?

- a) To make users explore the interface randomly
- b) To guide users through tasks logically and efficiently
- c) To increase the number of navigation buttons
- d) To prioritize aesthetics over usability

What is an essential consideration in the formatting of menus?

- a) Random placement of menu items
- b) Avoiding item grouping
- c) Making the menu as complex as possible
- d) Consistency in display, presentation, and organization

Why are keyboard shortcuts included in menu phrasing?

- a) To reduce user reliance on mouse interactions
- b) To ensure all menu options are hidden
- c) To complicate menu usage
- d) To replace menu titles
