

SET – 1

PART – B

Explain the concept of Direct Manipulation in Graphical User Interfaces. What are the key advantages and disadvantages of this interaction style?

Analyze the principles of good Web User Interface (WUI) design. How do these principles contribute to enhancing user experience on the web?

Evaluate common usability problems and suggest measures to improve usability in user interfaces.

Identify human considerations in design and discuss how human interaction speeds can impact user interface effectiveness.

Discuss the importance of organizing elements for consistency in interface design.

Describe the significance of navigation and flow in interface design.

Explain the key functions of menus in user interfaces. How do these functions enhance user experience?

What are the key considerations for accessibility in interface design? Discuss types of disabilities that should be addressed.

PART – C

Describe the Characteristics of GUI and List out the Advantage and Disadvantage of Graphical Systems

[OR]

Explain the Principles of User Interface Design

Elaborate about Know your User or Client

[OR]

Write about understanding the Business Function

Describe the Principles of Good Screen Design

[OR]

Formulate the Technological Consideration in Interface Design

Elaborate Structures of Menus and Functions of Menus in detail

[OR]

Illustrate the Navigating Menus and kinds of Graphical Menus

Discuss about Window Characteristics and Components of Window

[OR]

Summarize Types of Windows & Organizing Window Functions

SET – 2 PART – B

Write down the importance of Good Design

Differentiate UX & UI

Discuss about important Characteristics in design of User interface

Examine Design standards of style Guides.

How to organize Screen Elements clearly and meaningfully

Describe content of menu and formatting of menu

Explain the window Presentation Styles.

Discuss the various Window Operations

PART-C 5x12 =60 Marks - Answer ALL Questions (Descriptive)

Write down the Good Characteristics of Graphical and Web Interfaces and its benefits.

[OR]

Draw a neat sketch for UI design Process

Write about Understanding how people Interact with computers, Important Human Characteristics in Design, Human Considerations in Design and Human Interaction Speeds

[OR]

Elaborate Business Requirement Analysis, Functions, Design Standards, Style Guides, System Training and Documentation Needs

Discuss about Human Consideration in Screen Design Goals

[OR]

Describe Ordering of Screen Data Content & Focus and Enphasis

Write in detail about System menus and Navigation Schemes

[OR]

Elaborate Formatting of menus and Phrasing the Menu

Give the brief explanation about the types of Windows

[OR]

Elaborate Business Requirement Analysis, Functions, Design Standards, Style Guides, System Training and Documentation Needs

SET – 3 Part – B

Write about importance of User Interfaces.

Describe seven commandments of Interface design Process.

Examine the important Human Characteristics in Design

Illustrate Human Consideration in Design process of User Interface

Elaborate the basic Business Function

Explain various Structures of Menus Navigation

Discuss the components of a Window

Formulate International Consideration and Localization

PART C

Discuss the importance of good design in UI development and Elaborate the benefits of a well-designed user interface.

[OR]

Examine the popularity and characteristics of Web User Interfaces (WUIs) and Compare Web User Interfaces differ from Traditional Graphical User Interfaces.

Review the important human characteristics in design and their considerations. Explain how human interaction speeds influence performance versus preference in interface design.

[OR]

Construct the significance of understanding business functions in user interface design. Explain design standards or style guides and the importance of training and documentation needs in the context of usability.

Describe the principles of visually pleasing composition in interface design. How do distinctiveness, focus, and emphasis contribute to an effective design?

[OR]

Develop the Technological considerations in interface design. How do these factors affect the overall user experience?

Elaborate the different structures of menus used in interface design, highlighting their unique characteristics and applications.

[OR]

Explain the primary functions of menus in user interfaces. How do these functions enhance user experience and interaction?

Discuss the different types of windows and their presentation styles. How do these variations affect user experience?

[OR]

Write down the importance of international considerations in interface design. Discuss key factors to be aware of
